MEMORANDUM

Date: May 4, 2018
From: Weston Solutions, Inc., Anchorage, Alaska
To: Alaska Department of Environmental Conservation, Division of Spill Prevention and Response, Juneau, Alaska
Subject: Wrangell Monofill Project Support –Revised HELP Model

INTRODUCTION

Weston Solutions, Inc. (Weston) was tasked by the Alaska Department of Environmental Conservation (ADEC) Division of Spill Prevention and Response to run a revised Hydrologic Evaluation of Landfill Performance (HELP) model based upon a monofill cover design originally developed by Ecology and Environment, Inc. (E&E) and incorporating some design elements from a separate monofill cover design developed by Geosyntec Consultants, Inc. (Geosyntec). The original E&E HELP model can be found in *Volume I, Basis of Design; Wrangell Junkyard Repository Site, Wrangell, Alaska; TDD:17-01-0015*, 9 June 2017 (E&E, 2017); the original Geosyntec HELP model can be found in *Proposed Wrangell Monofill Report of Findings, Wrangell, Alaska*, 27 January 2017 (Ahtna and Geosyntec, 2017). Weston performed an evaluation and comparison of the two models in *Wrangell Monofill Project Support – HELP Model Evaluation Report, Wrangell, Alaska*, April 2018 (Weston, 2018).

Some elements of the Geosyntec cover design (geocomposite drainage system and high density polyethylene [HDPE] liner) were incorporated into the E&E design, and the revised design was analyzed using HELP modeling software. Results from the revised HELP model are summarized herein and in the model output included as Attachment A.

HELP MODEL ASSUMPTIONS AND INPUT

The following monofill cap layers are included in the revised model (from top to bottom):

1. 24 inches of cover soil, (top 6 inches to be able to sustain vegetative growth)
2. 12 inches of D-1 crushed rock
3. 4 inches of 3/8-inch minus sand, no fines
4. Geocomposite liner – non-woven geotextile heat bonded to both sides of a geonet
5. 60 mil HDPE liner, textured
6. 4 inches of 3/8-inch minus sand
7. 480 inches (40 feet) of contaminated waste soil
8. 24 inches of underlying gravel

A surface slope of 50% and a slope length of 50 feet was used as an input to the HELP model, as previously modeled by E&E. Compaction was not considered in this model as the waste layer has been modeled as a medium to low permeable silt layer.

The effective saturated hydraulic conductivity of the geocomposite has been lowered from HELP database values to better reflect the drainage geocomposite to be used in construction (presumably the GSE FabriNet 200 mil Geocomposite). The effective saturated hydraulic conductivity was lowered by a magnitude of one in order to account for a nonwoven geotextile heat bonded to both sides of a geonet. According to the GSE FabriNet 200 mil product data sheet, the geocomposite is shown to provide drainage flow at an order of magnitude less than utilizing geonet alone. In order to further refine HELP database soil parameters (i.e., Table 6, Default Geosynthetic Material Characteristics, HELP manual Vol. 3), including effective saturated hydraulic conductivity, additional materials and soils testing would be required (United States Environmental Protection Agency [EPA], 1994).

Precipitation data were synthetically generated by HELP using 30 years of stored data coefficients for Olympia, Washington, station latitude of 56.35 degrees. Temperature, evapotranspiration and solar radiation data were synthetically generated by HELP using 30 years of stored data from Annette, Alaska, station latitude of 56.35 degrees. These are the same data locations that were used in the E&E and Geosyntec HELP models.

HELP MODEL INFILTRATION RESULTS

A summary of infiltration results from the revised HELP model is provided in Table 1.

Table 1. Revised HELP Model Infiltration Results Summary

REVISED HELP MODEL INFILTRATION RESULTS – AVERAGE ANNUAL TOTALS	
Percolation/leakage through Layer 5 (60 mil HDPE liner)	262.46 (cubic feet) or 1,963 (gallons/acre/year)
Percolation/leakage through Layer 8 (final layer: base gravel layer)	3.99 (cubic feet) or 29.85 (gallons/acre/year)

The revised HELP model scenario is provided in **ATTACHMENT A**.
